333 West Wacker,

Chicago, IL.

Category: Multiple products

Products:

NuvoFlute (Column Covers)

NuvoPanel T+S (Soffit Panels)

NuvoForm (Fascia Panels)

Materials

#4 Stainless Steel

Nelson was specified in this project to create the exterior Column Covers, Soffit and Fascia panels. The Column Covers (NuvoFlute), Soffit Panels (NuvoPanel-T+S) and Fascia Panels (NuvoForm) were all made from #4 Stainless Steel, reflecting the blue hue of the colored glass above. Consistently ranked as one of Chicagoans' favorite buildings, 333 West Wacker references Chicago in what architect William Pedersen called a "collage of contextual references."

The design of 333 West Wacker echos traditional Chicago commercial buildings of the late 19th century. Its tripartite structure includes a base, shaft and capital. The base serves as the entrance, is composed of stone, and allows the glass facade to appear to "float" above the river.
