

Toronto, ON

The Well has three ceiling scopes provided by Nelson: Embossed panels in the main retail/public areas, Flat Soffit panels in the underground parking and NuvoSpan panels in the outdoor dining area.

The NuvoSpan was created for this project by utilizing a custom carrier channel and a 1/4 turn screw system. The embossed panel necessitated a unique fabrication process Nelson developed specifically for this project.

A highly-engineered innovative hybrid soffit or ceiling system allowing for much larger individual panel sizes than traditionally available in standard metal ceiling assemblies. This assembly offers superior wind load resistance capabilities without jeopardizing the 'large-panel' aesthetic
